

Report Notes and Summary

Reported prices for commodities are F.O.B. from the shipping point or packing house, or the equivalent price at the first delivery point. All data is for gross production and prices are the average received. Commodities produced by fewer than three growers have been placed in the miscellaneous category for the commodity group unless permission has been given otherwise. Numbers have been rounded at the first level of compilation (District reports).

FIELD CROPS: The reported value per unit produced was down for all crops except pasture and range. These increased in value as ample rain improved range forage and decreased irrigation requirements for pasture. Greenchopped alfalfa tonnage per acre declined because some acreage was diverted to hay production mid-season resulting in less greenchop cuttings for the acreage.

VEGETABLE CROPS: A slight increase in planted acres coupled with higher reported prices than 1997, pushed oriental vegetables to a record return for a second year in a row. Sweet corn acreage declined as last year's major grower substantially reduced his plantings. Most of the corn was marketed directly to consumers, resulting in higher prices received. Acreage in this category is reported to the nearest 1/10 acre due to the number of growers with multiple crops on small acreage, such as certified producers.

FRUIT AND NUT CROPS: Higher yields, prices and acreage for table grapes increased the total dollars received for grapes by 67% over 1997. Acreage reported for citrus crops declined in all categories except lemons. Yields and prices received were very close to those in 1997. Strawberry production fell 15% as frequent rains forced fruit stripping to control diseases.

LIVESTOCK AND POULTRY: Prices received for milk reached a record level driving the total value of this commodity to nearly \$480 million despite diminished production. Milk volume declined due to herd exhaustion and increased mortality from exposure during the cold, wet winter and spring. Liveweight sold declined for hogs and pigs as the animals were marketed earlier as a result of disease problems and nation-wide low prices for pork. Increased production of chickens only partially offset the reported precipitous plunge in poultry prices for pullets. Miscellaneous livestock value increased substantially over 1997 because of duck and ostrich production.

NURSERY PRODUCTS: Heavy rains discouraged landscape plantings leading to diminished sales. Bedding plants and turf production were also affected by the closing of two major production facilities in the early part of the year. Acreage for these two sites is included in the total. Roses have been included with trees and shrubs this year and account for a significant portion of the increase from 1997.

Commodity Group	1997 Acreage	1997 \$ Value	1998 Acreage	1998 \$ Value

1 Data from Santa Ana Regional Water Quality

2 Data from Animal Health Bureau, Dept. Food and Agriculture

Ag Fact! San Bernardino County has more cows than 43 of the 50 States.

Ag Fact! A dairy cow produces between six to seven gallons of milk each day.

Ag Fact! Bees are necessary to pollinate melons, grapes and most fruit crops. They are also necessary for producing seed for asparagus, brussel sprouts, squash, broccoli and many other vegetables.

Ag Fact! Many children dislike bees because they help produce brussel sprouts.
