

APPENDIX G  
*Hazards Memo*

## MEMORANDUM

---

**To:** Rachel Struglia, CEQA  
**From:** Glenna McMahon, Susie Smith, Hydrogeology/HazWaste  
**Subject:** Hazards Assessment for the San Bernardino County MSWSMP EIR  
**Date:** September 21, 2017  
**Attachment(s):** Table 1  
Figures 1 and 2  
A – EDR Regulatory Case Listings, Baker Sub Area  
B – EDR Regulatory Case Listings, San Bernardino Sub Area  
C – EDR Regulatory Case Listings, Trona Sub Area  
D – EDR Regulatory Case Listing, Victorville Sub Area  
E – EDR Regulatory Case Listing, Yucca Valley Sub Area

---

This Hazards Assessment was conducted for the Environmental Impact Report (EIR) for the Master Stormwater Sewer Maintenance Program (MSWSMP) in San Bernardino County, California. The intent of the MSWSMP is to provide a comprehensive approach to maintaining San Bernardino Flood Control District (District) facilities (program area) and ensuring compliance with regulatory requirements.

The objective of the Hazards Assessment is to determine if District facilities are listed in a regulatory database for hazardous materials/waste issues and/or if there have been any impacts to District facilities as a result of current or past hazardous materials storage or use on/at a facility or use adjacent to a facility that could impact the facility.

To identify potential hazardous materials impacts, Dudek contracted Environmental Data Resources Inc. (EDR) to conduct a search of regulatory records within the program area. EDR searched records from federal, state, local, tribal, and EDR proprietary databases. For this database search, a buffer of 1/8 mile was added around the program area boundary in order to capture potential impacts to the program area from adjacent sites.

The databases considered for this assessment, along with a brief description of each, are as follows:

*Memorandum*

*Subject: Hazards Assessment for the San Bernardino County MSWSMP EIR*

---

- LUST: Leaking underground storage tank incident reports. Source: California State Water Resources Control Board (SWRCB).
- Brownfields: Sites for which the expansion, redevelopment, or reuse may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Source: U.S. Environmental Protection Agency (EPA).
- EnviroStor: California Department of Toxic Substances Control (DTSC) list of sites with known contamination or sites for which there may be reason to investigate further. Source: DTSC.
- SLIC: Spills, leaks, investigations, and cleanup program sites. Source: SWRCB.
- LDS: Land disposal sites listing. Source: SWRCB.
- VCP: Sites with confirmed or unconfirmed releases that are considered low threat level where cleanup is overseen by the DTSC. Source: DTSC.
- RESPONSE: Confirmed release sites where the DTSC is involved in remediation. Source: DTSC.

Other databases searched by EDR either did not indicate a release of hazardous materials or did not include any results in the search area. In addition, the SWRCB GeoTracker website (SWRCB 2017) and DTSC EnviroStor website (DTSC 2017) were reviewed to verify information included in the EDR report and to ensure that all potential impacted sites were captured.

Information contained in this section is also based on documentation provided by the County of San Bernardino (County) in addition to documentation from local jurisdictions in which proposed program activities would occur. A list of permits for hazardous waste/materials storage and handling at sites within the County was reviewed. It contained information related to amounts of hazardous waste managed, hazardous materials stored, and underground storage tanks (USTs). Other sources consulted are listed in the References section below.

## **REGULATORY RECORDS**

Dudek identified a total of 364 sites within or near the program area as having releases or potential releases of hazardous materials or contaminants. Some of the sites are listed in several of the databases searched. Table 1 provides a summary of the 364 sites of concern. Information includes site name, address, site status and status date, contaminants of concern, and regulatory database listings.

Of the 364 sites identified as sites of concern, 269 are listed as closed or otherwise requiring no further action by the lead regulatory agency. These listings include the following types of sites:

*Memorandum*

*Subject: Hazards Assessment for the San Bernardino County MSWSMP EIR*

---

gas stations, landfills, auto mechanics, various other manufacturing sites, and schools. Sites with known releases, such as gas stations, landfills, and other similar sites, could have residual impacts remaining in the soil. Although these sites no longer require regulatory action, residual impacts could pose a risk to the proposed program. Special care should be taken at these sites to maintain worker safety, allow for the proper identification and storage of impacted materials, and provide appropriate treatment of impacted media. The regulatory status of these sites is shown in orange on Table 1.

Of the 364 sites identified as sites of concern, 36 are listed as inactive or referred to another agency. These types of sites may have deferred investigation, be operated by uncooperative parties, or have been referred to another regulatory agency. It is unlikely that these are high-risk sites, because the regulatory agencies would treat them with more urgency. However, because there is limited information, the extent of impacts is unknown. Therefore, impacts could be present and pose a risk to the proposed program. The regulatory status of these inactive/referred to another agency sites is shown in yellow on Table 1.

Of the 364 sites identified as sites of concern, 59 are listed as open or active. Thirteen of the 59 open/active sites are adjacent to a concrete drainage feature. As the proposed program does not involve removal of concrete drainage features (therefore, eliminating potential contact with soil or groundwater), it is not expected that these sites would impact proposed program activities or proposed program activities would exacerbate the existing environmental conditions of these sites. The regulatory status of these 13 open/active sites adjacent to drainage features is shown in yellow in Table 1. The remaining 46 sites of concern are depicted on Figure 1, Hazardous Waste/Materials Impacted Sites – Valley and Mountain Regions, and Figure 2, Hazardous Waste/Materials Impacted Sites – Desert Region. A brief description of each of these sites, based on the EDR subareas, is provided below.

**Baker Subarea**

The **ARCO Station 5951** is located at 72111–72097 Baker Boulevard. The site is an active gasoline service station. A release of gasoline was reported in 1993; impacted media are soil and shallow groundwater. Free product was noted in several of the wells in 2015. In a December 2016 letter, the Lahontan RWQCB noted that free product is reported in monitoring wells and concentrations of dissolved benzene exceeding 1,000 µg/L were reported in groundwater; the groundwater plume extends off site beneath a nearby hotel. The extent of soil impacts are not known. Based on a May 2015 groundwater contour map, the groundwater flow direction is toward the north.

*Memorandum*

*Subject: Hazards Assessment for the San Bernardino County MSWSMP EIR*

---

The **Former Texaco Station site** is located at 72132 Baker Boulevard. The site is a former gasoline service station that is currently used as a restaurant. A release of gasoline was reported in 1994 and four USTs (two gasoline, one diesel, one unknown) were removed from the site in 1999. The impacted media are soil and shallow groundwater. In a December 2016 letter, the Lahontan RWQCB noted that free product is reported in monitoring wells and concentrations of benzene exceeding 3,000 µg/L were reported in groundwater within 30 feet of building foundations; the extent of soil impacts are not known. Based on a May 2015 groundwater contour map, the groundwater flow direction is toward the north.

The **Unocal Station** is located at 72137 Baker Boulevard. The site is an active gasoline service station. A release of gasoline was reported in 1993 and two USTs (gasoline) were removed and replaced in 1999. The impacted media are soil and shallow groundwater. In a December 2016 letter, the Lahontan RWQCB noted that free product is reported in monitoring wells and concentrations of benzene and methyl tert-butyl ether (MTBE) exceeding 1,000 µg/L are present. The groundwater plume extends off site beneath a building to the east, and free product has increased. There is no information about source removal (primary or secondary). Based on a May 2015 groundwater contour map, the groundwater flow direction is toward the north.

The **Former Xcel Station site** is located at 72307 Baker Boulevard. The site is a former gasoline service station. The site last operated as a gas station in 1998; USTs were removed from the site in 2001. Impacted soil was noted during the UST removal and a release of gasoline was reported. Based on documents reviewed on GeoTracker, it does not appear that additional work has been performed at the site since the 2001 UST removal. A well was installed on the site in 2009 as part of an investigation at a nearby site; free product was measured in the on-site groundwater monitoring well. Based on information at nearby sites, the groundwater flow direction is expected to be toward the north.

The **John Cagigas Property site** is located at 72358 Baker Boulevard. The site is a former gasoline service station and is currently vacant land. A release of gasoline was reported in January 1998 and one UST (gasoline) was removed from the site in March 1998; impacted media are soil and shallow groundwater. An August 2016 letter from the Lahontan RWQCB states that there is free product beneath the site and that secondary source removal may be necessary. Based on a May 2015 groundwater contour map, the groundwater flow direction at the site is toward the north, with fluctuating east and west components.

## **San Bernardino Subarea**

### ***RWQCB Listings (LUST, SLIC, LDS)***

The **Gas Plus site** is located at 1266 South E Street in San Bernardino. The site is currently vacant but the former station building is still located on the property. A release of gasoline was reported in 2000 following the removal of two USTs. The impacted media are soil and groundwater. Soil vapor extraction (SVE) has been conducted at the site since 2014. According to documents reviewed on GeoTracker, the groundwater flow direction is toward the east-southeast.

The **Fast Fuel Service Station site** is located at 1315 Fourth Street in Ontario. According to information available on GeoTracker, a 1996 site investigation warranted additional investigation but the site is recalcitrant. No additional information was available.

The **Higgins Brick Co. site** is located at 15920 Pomona Rincon Road in Chino Hills. According to information available on GeoTracker, an estimated 8,000 cubic yards of petroleum hydrocarbon-impacted soil is on site. A 2016 workplan for the site documents plans to bury the impacted soil on site in areas lined with filter fabric. No additional information was available.

The **Redlands Airport site** is located at 1755 Sessums Drive in Redlands. A plume of groundwater impacted with trichloroethylene (TCE) and perchlorate ( $\text{ClO}_4^-$ ) is located beneath the site. The source of the impacted groundwater is not reported. No additional information was available.

The **P&M Service Station No. 937 site** is located at 208 Waterman in San Bernardino. A release was reported in 1999 and a site assessment is underway. No additional information was available.

Multiple sites are listed at the **Colton Terminal** –ARCO (2395 Riverside Avenue), and Santa Fe Pacific Pipe Line (2720 Slover Avenue). The Colton Terminal is a bulk petroleum storage and transfer facility; product is shipped to the facilities via pipeline. The groundwater flow direction in the area is reportedly toward the southeast. Impacted soil and groundwater are present at the Colton Terminal.

The **ARCO No. 5550 site** is located at 2488 Reservoir Street in Pomona. The site is listed as eligible for closure. According to information on GeoTracker, the groundwater flow direction is toward the south. Impacted soil at the site is reportedly limited and likely does not extend off site.

The **Bear Oil Co. Inc. site** is located at 24913 Redlands Boulevard in Loma Linda. According to a 2010 letter to the Santa Ana RWQCB, the County transferred the site to the RWQCB due to impacts from neighboring sites. A 2003 report reviewed on GeoTracker reports that free product

*Memorandum*

*Subject: Hazards Assessment for the San Bernardino County MSWSMP EIR*

---

was noted on neighboring sites that were former gas stations. The report also documented the removal of impacted soil in the UST pit, with maximum concentrations in place at 15 feet below ground surface (bgs). Total petroleum hydrocarbons–gasoline (TPHg) and other VOCs were detected in groundwater samples; saturated soil was encountered at 23 and 38 feet bgs.

The **San Bernardino City Municipal Water Dept. (WRP) site** is located at 399 Chandler Place in San Bernardino. The site is listed as open but closed with verification monitoring. According to documents available on GeoTracker, when water levels are high enough, groundwater at the site is monitored for salts, conductivity, total dissolved solids, and metals.

The **Moonridge Station site** is located at 42081 Big Bear Boulevard in Big Bear Lake. The site is an active gasoline service station. According to information available on GeoTracker, the site previously had free product in the groundwater monitoring wells. Two separate releases are believed to have occurred: an older BTEX release and a more recent MTBE release. In a 2001 workplan available on GeoTracker, the plume is believed to have originated off site in a utility corridor. The site is recalcitrant.

The **P and M Station No. 937 site** is located at 501 Inland Center Drive in San Bernardino. The site is an active gasoline service station. A release of gasoline was reported when five USTs were removed from the site in 1998. SVE remediation was conducted at the site for 3 months in 2011. The groundwater flow direction at the site is reportedly toward the northeast. Based on 2016 groundwater monitoring data, TPH and VOCs were not detected. The site is currently eligible for closure.

The **Mobil Oil site** is located at 520 Orange Show Road in San Bernardino. The site is an active gasoline service station. A release of gasoline was reported in 1994. Impacts to soil are reportedly limited to the site. Groundwater sampling data collected in December 2016 reports low concentrations of TPHg, MTBE, and TBA in groundwater. The groundwater flow direction at the site is reportedly toward the southwest.

The **Circle K No. 0358 site** is located at 540 Big Bear Boulevard in Big Bear. The site is an active gasoline service station. A release was discovered in 1998 during UST removal. Groundwater sampling results from 2015 report maximum concentrations of TPHg, benzene, and MTBE at 28,000 µg/L, 610 µg/L, and 850 µg/L, respectively. Dual-phase extraction and SVE remediation were conducted at the site for multiple years between 2003 and 2016.

The **Montclair Gas N Wash site** is located at 5515 Holt Boulevard in Montclair. The site is a vacant gasoline service station. The release was to soil only and SVE was conducted continuously from 2006 to 2011. According to documents on GeoTracker, MTBE was detected

*Memorandum*

*Subject: Hazards Assessment for the San Bernardino County MSWSMP EIR*

---

in soil to a maximum depth of 170 feet bgs. Based on information available on GeoTracker, it does not appear that work has been conducted on site since 2011.

The **Foss Brothers Dairy site** is located at 6641 Riverside Drive in Chino. The site is a former dairy farm; a commercial market/convenience store and parking lot are currently located at the site. A release of gasoline was discovered in 2003 during UST removal. SVE was conducted intermittently at the site for several months between August 2006 and April 2007. Based on information available on GeoTracker, it does not appear that work has been conducted on site since 2007.

The **Safety Kleen Corp. site** is located at 7979 East Palm Avenue in Highland. The site is an active hazardous waste storage and chemical distribution facility. DTSC was the lead regulatory agency for the investigation and remediation at the site; the site was closed by DTSC in 2010. The open mineral spirits LUST case is likely an oversight because DTSC documentation reports that a 10,000-gallon mineral spirits case was closed in 1993.

The **Alabama Street Septage Pits site** is located at 8203 Alabama Street in Redlands. The site was used for septic tank waste disposal from the 1920s to 1986; the pits were also used to collect dewatering and gravel wash water discharge from a nearby concrete plant from 1973 to 1989. Impacts reportedly consist of lead sludge, petroleum hydrocarbons, VOCs, salts, acids, and total organic carbon.

The **San Bernardino County Waste Mgmt. Colton Landfill site** is located at 850 West Tropica Rancho Road in Colton. The site is an operating landfill. A 2017 groundwater monitoring report for the site documented elevated nitrate, manganese, and turbidity concentrations; low concentrations of VOCs and SVOCs were detected in a condensate sample.

The **Calnev site** is located at 2051 E Slover Avenue in Bloomington. The site is an active bulk petroleum storage and transfer facility. According to a 2017 groundwater monitoring report, free product is present in perched zone groundwater monitoring wells. Impacts to groundwater include benzene, MTBE, and TBA. SVE remediation has been conducted at the site since 2011.

The **Cooley Ranch Landfill** is located on Washington Street near RV Center Drive in Colton. The site is a former Class II landfill that ceased operation in 1965; the landfill accepted nonhazardous and inert solid wastes. According to information available on GeoTracker, no groundwater impacts were noted and groundwater monitoring wells were abandoned in 2009.

A regulatory case status was not presented for the **BNSF-Maintenance site** located at 1500 West Rialto Avenue in San Bernardino. The impacted media is reportedly groundwater contaminated with TPH and solvent.

*Memorandum*

*Subject: Hazards Assessment for the San Bernardino County MSWSMP EIR*

---

DTSC Listings (EnviroStor, VCP)

The **Western Moldings site** is located at 1111 East Eighth Street in Upland. The site was formerly used to manufacture metal parts. Solvent and petroleum hydrocarbon impacts to soil were reported in multiple areas on site. An unknown volume of soil was excavated and SVE remediation was conducted for an unreported time. PCE was detected in soil to 70 feet bgs. Groundwater was not evaluated as part of the regulatory process.

The **Southridge Plaza site** is located at 11617 Cherry Avenue in Fontana. The site is an active dry cleaning facility located in a shopping center. According to a 2016 Work Plan reviewed on EnviroStor (DTSC 2017), PCE was detected in soil and soil vapor at the site. SVE remediation was conducted at the site from January 2015 to January 2016. A March 2017 letter from DTSC states that a closure letter will be issued upon the submittal of a Closure Report.

The **Fontana Plating Facility site** is located at 130 West Mindanao Street in Bloomington. The site is a former metal plating shop that ceased operations in 2012. The site is listed as an open SLIC case but was transferred to the DTSC for regulatory oversight in 2016. According to information available on GeoTracker, the groundwater flow direction at the site is toward the south-southwest. Elevated concentrations of arsenic were detected in soil samples collected in 2013. Additional soil sampling was conducted in 2016 with the following results: low pH, no VOCs detected, elevated arsenic, and various metals below screening levels; no further action was requested.

The **Advanced Steel Recovery site** is located at 14451 Whittram Avenue in Fontana. The site is a metal recycling facility. According to a 2016 sampling report, impacts to soil include metals (chromium, lead, copper, and zinc) and PCBs.

The **Lamonk Property site** is located at 1603 Steel Road in Colton. The site was previously used as an automobile salvage yard but has been vacant since the 1970s. A Land Use Covenant was placed on the site in 2016 due to the presence and capping of impacted soils. Soils impacted with metals, PCBs, and TPH remain on site beneath an earthen cap.

The **Applied P&CH Lab site** is located at 4066 East Mission Boulevard in Montclair. No additional information about the site is available.

The **Terminix site** is located at 440 South Sierra Way in San Bernardino. The site is currently vacant but was formerly used by Terminix pest control operations facility. According to information on EnviroStor, pesticides were found in the soil in 1986 at an adjacent school. Approximately 8,000 tons of soil was excavated from the school and site. Additional

*Memorandum*

*Subject: Hazards Assessment for the San Bernardino County MSWSMP EIR*

---

investigation conducted in 2003 revealed chlorinated pesticide-impacted soil to 12 feet bgs at the site. No additional information about the site was available.

The **Colton Iron & Metal site** is located at 790 East M Street in Colton. The site was formerly used for boxcar manufacturing/refurbishment, scrap metal dismantling, and auto dismantling; the site is currently used as a metal sorting and consolidation facility prior to transport off site for recycling. Investigations at the site have revealed elevated concentrations of arsenic, lead, and PCBs in the soil.

The **North San Bernardino Area site** is the Bunker Hill groundwater basin located in San Bernardino. The site is the location of TCE and PCE-impacted groundwater in the municipal water supply. Water from the Newmark Well Field (located within the basin) has been treated with air stripping then activated carbon since 1986.

DTSC Listings (SCH – Schools)

Multiple school sites were listed in the EDR Report with statuses of Active, Inactive, and No Action Required. None of the school sites are believed to pose a threat to the proposed program.

***Trona Subarea***

The **Borrow Pit Waste Disposal site** has a reported location of First Street Extension, approximately 750 feet north of the program area in Trona. The site is listed in the LDS database but no additional information about the waste, disposition, or media impacted is provided.

***Victorville***

The **BNSF Railway Barstow site** is located at 200 North Avenue H in Barstow. The site is an active classification railyard. A diesel release was first reported in 1988 as a result of a hole in a product pipeline; the pipeline was repaired but ultimately abandoned and closed. According to an August 2016 groundwater monitoring report, the groundwater flow direction is toward the north and shifts to the east-southeast downgradient of the source. Free product was reported in one of the groundwater monitoring wells sampled in 2016.

The **San Bernardino County Phelan Landfill site** is located at 10130 Buckwheat Road in Phelan. The site is the location of a closed landfill that previously accepted agricultural, construction, demolition, industrial, and mixed municipal waste until 1997. The LDS database reports the site as Open – Closed with Verification Monitoring.

*Memorandum*

*Subject: Hazards Assessment for the San Bernardino County MSWSMP EIR*

---

The **Nuway Laundry & Cleaners site** is located at 15595 Eighth Street in Victorville. Chlorinated solvents were first identified at the site in 2007 during site assessments conducted by EPA. Select areas of impacted soil were removed from the area and SVE was conducted and successfully reduced PCE concentrations. PCE-impacted groundwater was discovered in 2014 to the northeast of the site and was later determined to be associated with the release at the Nuway site. The groundwater flow in the vicinity of the site is reportedly toward the north-northeast.

The **Beck Oil Bulk Plant** is located at 16924 D Street in Victorville. A release of gasoline was reported in 1992. The impacted media is reported to be groundwater. Additional information was not available.

The **Mojave Rock and Sand site** is located at 18525 Bear Valley Road. A release of gasoline to the soil was reported in 1992. The listing reported that the soil was to be excavated and treated. No additional information was presented in the database listings or on online databases searched.

The **E Street River Plant** is located at 25220 Black Mountain Road in Victorville. According to reports on GeoTracker, the site is currently owned by CEMEX. Groundwater is reportedly pumped from beneath the site and is used for the cooling towers; groundwater at the site reportedly contains PCE and TCE that are believed to be from an unknown upgradient source. After cooling, the water is discharged to percolation ponds. Several unlined ponds were used as landfills for cement kiln dust slurry, waste cement, clinker, kiln feed, spent refractory chrome bricks, and limestone. Groundwater flow direction at the site is toward the north-northwest.

The **Calico Truck Stop site** is located at 37587 Calico Boulevard in Yermo. The site is currently a vacant lot. According to an April 2016 RWQCB letter, a release was reported at the site in 1991. Four USTs (diesel) were removed from the site in 1999 and the soil was reportedly stockpiled on site; the tank pits were open and filled with trash in a 2013 site visit. The extent of the impacts to soil were not delineated but the impacts are not believed to extend into groundwater (approximately 140 feet bgs).

The **D Street Investigation site** is located at sixth Street and D Street in Victorville. According to information presented in the listing, elevated concentrations of chlorinated hydrocarbons are present in groundwater in the vicinity of the site. Additional information was not available.

***Yucca Valley***

All listings were reported as closed.

## **RECOMMENDATIONS**

As there are potential hazardous materials impacts to the program area, a hazardous materials contingency plan should be prepared prior to ground-disturbing activities at District facilities that have an “open” or “active” regulatory case listing (Table 1) at the facility or adjacent to it (with the exception of the sites that are adjacent to concrete drainage features). Air monitoring during trenching and excavation may be necessary to limit worker exposure to potential hazardous chemicals in the subsurface. The hazardous materials contingency plan would identify areas with known hazardous materials concerns; include procedures for managing hazardous materials; prescribe sampling, if necessary; and discuss health and safety measures (e.g. air monitoring) that should be implemented during ground-disturbing activities.

Prior to commencement of maintenance activities, a health and safety plan should be developed to provide guidance to maintenance/construction crews who may manage/handle hazardous material (e.g. fuels, solvents) and encounter previously unknown soil or groundwater contaminants. This plan shall include information about potential contaminants, protocols for reporting suspected contaminants, authority to stop work, and protocol for conducting further study, if necessary.
